TO FIND NUMBER OF TREES OR PLANTS PER ACRE WITH ANY GIVEN PLANTING DISTANCES

Multiply the distance in feet between the rows by the distance the plants are apart in the rows and the product will be the number of square feet for each plant or hill; which divided into the number of feet in an acre (43,560) will give the number of trees to an acre.

MASSACHUSETTS TRUENESS-TO-NAME INSPECTION SERVICE

A service to nurserymen and fruit growers to promote trueness to name of fruit varieties.

Sponsored by The Massachusetts Fruit Growers' Association

Statement of Inspection for Trueness-to-name

Amherst, Mass.

.....August 16,.....1948...

Whom It May Concern:

All of the apple, pear, plum, sweet cherry and two-year sour cherry varieties propagated and now growing in the nurseries of Ilgenfritz Nurseries, Inc., Monroe, Michigan have been examined by the Massachusetts Trueness-to-name Inspection Service. To the best of our knowledge, these trees are true-to-name as they now stand in the nursery row.
